

# HOMESTRETCH<sup>TM</sup> Mn 6%<sup>NUTRITIONAL</sup>

## Put Plants on the Fast Track to Higher Yields

HOMESTRETCH MN 6% is a fully chelated solution recommended for the prevention and/or correction of manganese deficiency in all crops when used as a part of a balanced fertility program.

### PRODUCT BENEFITS

- Ideal for use with liquid starter fertilizers and as a foliar application in difficult tank mixes
- Superior compatibility with:
  - Almost all NPK fertilizers
  - Thiosulfate solutions
  - Orthophosphates, Polyphosphates
  - High pH solutions
  - Nitrogen and SRN solutions
- Application flexibility. May be mixed directly into growing media, applied as a soil drench or added to fertigation systems.
- More efficient than other forms of nutrients; up to 6x ratio in harsh soil conditions

### AGRONOMIC BENEFITS

**Manganese:** aids in herbicide metabolism, chlorophyll formation and plant respiration. It is also critical to photosynthesis

### PRODUCT AVAILABILITY

Products are available in both 2.5 gallon jugs and 250 gallon totes.

### ACTIVE INGREDIENTS

<b>Guaranteed Analysis</b>
Manganese (Mn) ..... 6.00%

*Derived from manganese ethylenediaminetetraacetate*

### APPLICATION RECOMMENDATIONS

#### Soil Application

HOMESTRETCH MN 6% is recommended for use on all types of soils. Because this is a concentrated solution, it should be diluted before use to ensure uniform coverage. Soil applications may be made by drip, sprinkler or furrow irrigation systems or in band or broadcast fertilizer applications. For trees or individual plants, the product may be diluted as above or sprinkled directly on the soil uniformly under the plant's drip line, then watered in. NOTE: The rates given below are based on broadcast application. If broadcast rates are used for spot or banded applications, phytotoxicity may result.

**Field, Row, Vegetable Crops: Apply 2-8 quarts per acre.** Fruit, Tree and Vine Crops: Apply 2-10 quarts per acre or 1 to 5 Tbsp per inch of tree diameter.

#### Foliar Application

Avoid applying this product when plants are suffering from moisture stress. If there is any doubt, apply the spray solution to a small test area of the crop or foliage to assess any undesirable effects or phytotoxicity before general application. **Field, Row, Vegetable Crops: Apply 1-2 pints per acre in a minimum of 20 gallons water.** Fruit, Tree and Vine Crops: Apply 1-2 pints per acre in a minimum of 25 gallons water. For smooth skinned fruit apply 1 pint per acre in 50-100 gallons of water.

#### Aerial Application

Apply 0.5-1 pint per acre in at least 10 gallons of water. Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture), weather conditions, time of year, plant species and general health. For best results, follow soil/tissue test recommendation.
