AGRONOMIC BENEFITS

Sulfur: aids in protein and enzyme synthesis.

Boron: Boron provides structural integrity and flexibility to the primary cell walls. It also improves vegetative and reproductive growth.

Manganese: aids in herbicide metabolism, chlorophyll formation and plant respiration. It is also critical to photosynthesis.

Molybdenum: Molybdenum is involved in many functions within the plant. It aids nitrogen and sulfur metabolism, as well as aids in hormone biosynthesis and toxic compound transformation. It is essential to root nodulation formation in legumes; and helps convert N₂ to ammonium and converts nitrate to nitrate.

Zinc: promotes root and shoot growth; helps plants withstand environmental stress.
