

# MERISTEM FEATURED PRODUCTS

## RACEREADY™ SEED TREATMENT PORTFOLIO NOW WITH MEFONOXAM

### PRODUCT LIST

### HOW THE PRODUCT WORKS

The **RACEREADY** product line is a custom blend of conventional chemistries known for control of common fungal and insect pressures on seed. Meristem specifically chose the actives used in **RACEREADY** products to provide a broad spectrum, bulletproof offering that pairs well with the biological treatments being used on the seed and in the planter box. All **RACEREADY** blends use a combination of systemic and free-living actives while stacking modes of action to ensure the seed has all it needs for a healthy start and reaching its maximum potential.

### WHY FARMERS USE THE PRODUCT

**RACEREADY** is unlike most competitive products by stacking technologies from multiple basic suppliers and coupling them with polymers and colorants that are safe for the biological treatments being used on the seed and in your planter box. As a farmer working with Meristem, you get the assurance of a strong start with healthy seeds and the unsurpassed convenience of conventional chemistry all-in-one offering.

### TESTIMONIAL

*Adam Conrad, Axis Ohio, Marion, OH*

"We have used **RACEREADY** seed treatment for several years now. The products have been extremely easy to use in the pre-blended formulas and our customers can rest assured they are getting a premium product to protect the investment they have made in our seed."
